The Ultimate Guide to WordPress Multisite

<https://wpmudev.com/blog/ultimate-guide-multisite/>

Open up wp-config.php and add this line **above** where it says `/* That's all, stop editing! Happy publishing. */`. If it doesn't say that anywhere, then add the line somewhere above the first line that begins with `require` or `include`:

```
define ('FS_METHOD', 'direct' );  
define ('WP_AUTO_UPDATE_CORE', 'minor' );  
/* Multisite */  
define( 'WP_ALLOW_MULTISITE', true );
```
