Unable to delete missing HDD from filesystems

<https://forum.openmediavault.org/index.php?thread/17629-unable-to-delete-missing-hdd-from-filesystems/>

OMV doesn't get "stuck" when removing configurations, I've found that the creation process must be done in reverse order. In your case it would be:

1. Delete Samba/CIF shares
2. Delete the Shared folders
3. Unmount and Delete the file system
4. Delete the RAID array
- 4.1 And to be sure, go under **Storage, S.M.A.R.T, Devices**, and turn monitoring off for the physical disk(s) you want to delete. Delete all **schedule tests**, if any.
After that's done, under the **Settings** Tab, you could turn S.M.A.R.T off completely.
5. Delete the physical disks
