

Windows Laptops/Netbook related

Laptop has slow or no internet connection.

ping TTL time should be 2ms ~ 5ms. Around 10ms is ok.

Update driver first and restart OS.

If the issue remain the same, reseal the Wi-fi card and antenna .

If the ping value remain unstable, high, or no connection, then swap with a known good wi-fi card for testing.

If the issue remain the same, the it is most like the wi-fi card is defected.

ping command

```
ping -n 100 -i 255
```

-i : It sets the Time to Live (TTL) value, the maximum of which is 255.
